

MIL-STD-461 EMI INPUT FILTER FGDS-20A-50V : up to 20A CURRENT

Hi-Rel
Grade ■■

20A EMI Filter Module 9 to 50 VDC Input Range MIL-STD-461D/E/F & DO-160C/D/E/F/G Compliant

1-General

The GAIA Converter filter module FGDS-20A-50V provides a state-of-the-art product to fulfill Electromagnetic Interferences (EMI) requirements for Aerospace and Defence applications.

The FGDS-20A-50V is a very compact and low loss solution for applications requiring up to 20A input current.

The FGDS-20A-50V complies with major standards including :

- the US MIL-STD-461 rev D, E and rev F
- the international DO-160 rev C, D, E, F & rev G

In particular, the filter module is compliant with the following requirements of MIL-STD-461D/E and DO-160-C/D/E standards :

• **MIL-STD-461D/E/F Part 2. & 3. requirements :**

- **Conducted Emission (CE)**
 - CE102, power leads, emission over 10KHz to 10MHz, basic curve
- **Conducted Susceptibility (CS)**
 - CS101, power leads, frequency 30Hz to 150KHz, curve #1
 - CS114, bulk cable injection, frequency 10KHz to 400MHz,

- CS115, spikes, bulk cable injection calibrated spike
- CS116, damped sinusoidal transient

• **DO-160-C/D/E/F/G requirements :**

- **Conducted Emission (CE)**
 - Section 21 power lines, emission over 15KHz to 152MHz, category B, AZ & LMH
- **Conducted Susceptibility (CS)**
 - Section 20 power lines, frequency 10KHz to 400MHz

In addition, this filter withstands in a transparent state without damage the transient and spike requirements of :

- MIL-STD-704A/D/E/F with up to 80V/100ms
- MIL-STD-1275A/B/C/D with up to 100V/50ms

The FGDS-20A-50V is suitable for all GAIA Converter DC/DC converters and DC architecture

- from 50W up to 300W output power
- up to 20A output current
- up to 50V permanent input voltage.

2-Product Selection

FGDS-20A-50W/ option

Options :

- /T : option for -55°C start up operating temperature
- /S : option for screening and serialization

3- Electrical Specifications

Data are valid at +25°C, unless otherwise specified.

Parameter	Conditions	Limit or typical	Units	FGDS-20A-50V
Input				
Nominal input voltage	Full temperature range	Nominal	VDC	28
Permanent input voltage range (Ui)	Full temperature range	Min. - Max.	VDC	9 - 50
Transient input voltage	Full load	Maximum	VDC/ms	80/100
		Maximum	VDC/ms	100/50
Output				
Permanent output current	Full temperature range up to 100°C case Ui min. to max.	Maximum	A	20
Permanent output power	Full temperature range up to 100°C case Ui min. to max.	Maximum	W	300
Power dissipation	Current 20A @ 25°C	Maximum	W	2
	Current 20A @ 85°C	Maximum	W	2,6
Thermal resistance	Case to ambient in free air cooling	Nominal	°C/W	15
General				
Electrical strength test voltage	Case to any pin	Minimum	VDC	500
	Gnd pin to any other pin	Minimum	VDC	500
Reliability data MTBF according MIL-HDBK-217F	Conditions Gf	@40°C	Hours	27 000 000
		@85°C	Hours	7 000 000
	Conditions AIC	@40°C	Hours	13 000 000
		@85°C	Hours	3 500 000

4- EMI Filter Electrical Schematics

The GAIA Converter FGDS-20A-50V is suitable for all GAIA Converter DC/DC converters and combinations :

- from 50W up to 300W total output power and up to 20A output current
- up to 50V permanent input voltage and up to 100V transient input voltage during 50ms.

4-1 EMI Filter Electrical Schematics in Front of Modules

The GAIA Converter FGDS-20A-50V can be used directly in front of any DC/DC converter and combination of DC/DC converters from 50W up to 300W power and up to 20A input current.

In order to exceed the EMI requirements of MIL-STD-461D/E/F or DO-160C/D/E/F/G it is recommended to use 2x FGDS-20A-50V in series as shown in the following figure.

Configuration with one FGDS-10A-50V in certain case can be implemented : please consult factory.

For better EMI performance and stability purpose GAIA Converter recommends to use a R*C* cell (see section 4) together with common mode noise capacitance (10nF typical) connected to the converters as it is detailed in individual DC/DC converter datasheet.

4-2 EMI Filter Electrical Schematics in a Complete Front-end Architecture

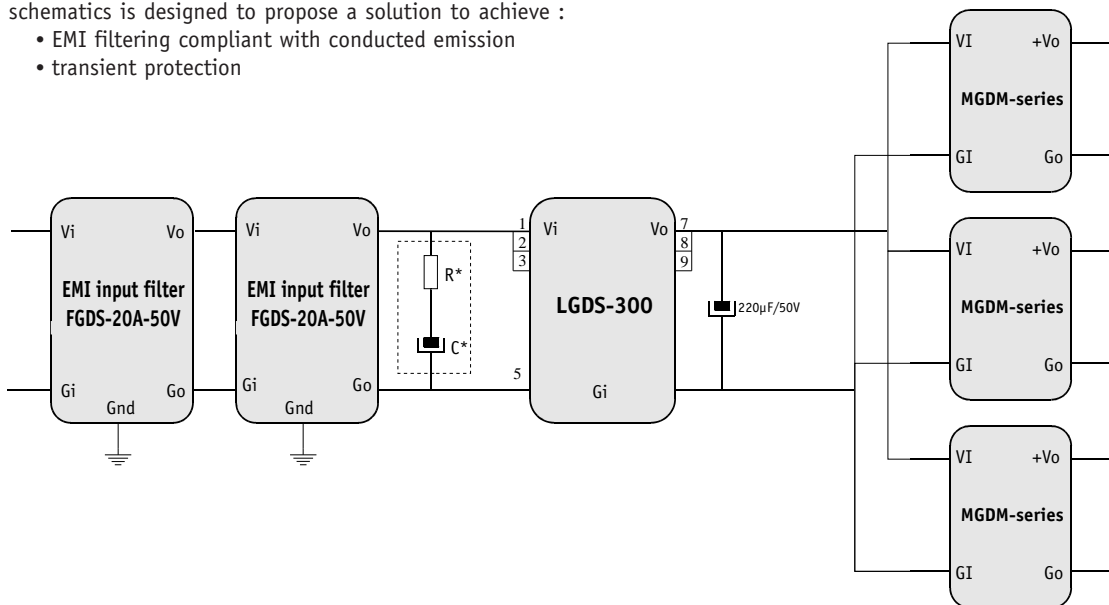

The GAIA Converter FGDS-20A-50V can be used in a complete architecture combining transient protection module LGDS series and combination of DC/DC converters. In order to exceed the EMI requirements of MIL-STD-461D/E/F or DO-160C/D/E/F/G it is recommended to use 2x FGDS-20A-50V directly in series up front as shown in the following figure.

Configuration with one FGDS-20A-50V in certain case can be implemented : please consult factory.

For better EMI performance and stability purpose GAIA Converter recommends to use a R*C* cell (see section 4-3) (together with individual DC/DC decoupling capacitors as detailed in individual DC/DC converter datasheet).

This schematics is designed to propose a solution to achieve :

- EMI filtering compliant with conducted emission
- transient protection

4- EMI Filter Electrical Schematics (continued)

4-3 R*C* Network Discussion

The RC damping network is used for stability purposes in negative input impedance systems such as DC/DC converters.

DC/DC converters are negative input impedance systems whereas, filters are composed of passive elements and display a positive output impedance to the converter.

To ensure the stability of the whole system “LISN + input Filter + DC/DC converters”, the filter output impedance must be kept below the converter’s input impedance, which is given by the following formula :

$$Z_{in} = \frac{V_{in}^2}{P_{in}} = \frac{V_{in}^2 \times \eta}{P_o}$$

where :

- V_{in} is the converter input voltage,
- P_{in} is the converter input power,
- P_o is the converter output power
- η is the efficiency of the converter.

As it can be seen from the preceding equation, the worst case for system’s stability is at $V_{in_{min}}$, so this is the condition which should be considered for the filter design.

As the filter is made of low ESR inductors and ceramic capacitors, it has an important quality factor Q which causes a sharp increase of the filter’s output impedance at the resonant frequency and leads to a violation of the stability criteria, causing the system to break into oscillations.

Consequently, the values of RC network has to be adjusted to dampen sufficiently the filter’s resonance and make its output impedance lower than the converter’s input impedance.

The value of the RC network strongly depends on the application’s conditions (input voltage range and total power drawn from the source as well as the standards that the equipment has to meet MIL-STD-461 or DO-160 ...) this because measurements method (LISN) differs from one standard to another affecting the C value.

In most applications a low ESR aluminium electrolytic capacitor can be used for damping the network and it’s **internal ESR value will be enough to dampen the input voltage without adding external resistor.**

The table hereafter summarizes the recommended capacitor value at 100% output load for various power according to DO160 and to MIL-STD-461 standards. The capacitor value can be linearly reduced depending on output power; for example, it can be divided by 2 at 50 % load...

Total Power	75W	100W	150W	200W	300W
Capacitor Value for MIL-STD-461 standards	330 μ F	470 μ F	470 μ F	680 μ F	1 000 μ F
Capacitor Value for DO-160 standards	100 μ F	100 μ F	220 μ F	220 μ F	330 μ F

5- MIL-STD-461D/E/F Conducted Emission Tests Set-Up

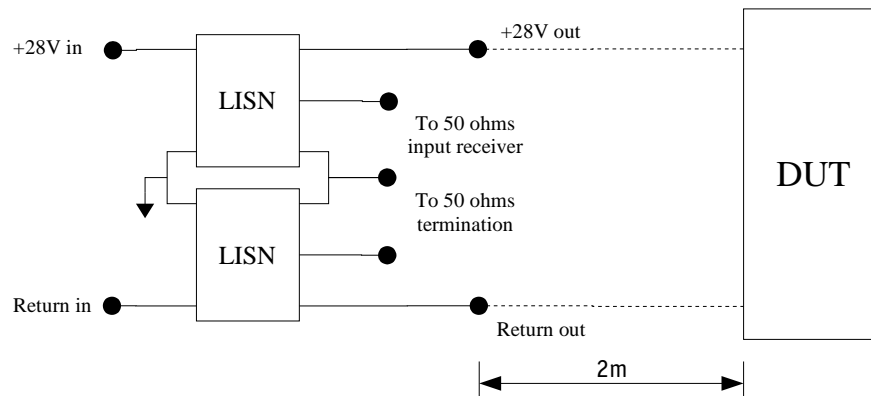

5-1 MIL-STD-461D/E/F Measurement Method

The conducted noise emission measurement method is described in the MIL-STD-461D/E/F standards.

The «DUT» (Device Under Test) is powered thru a 2 meters length parallel wire.

One end is terminated with the DUT and the other end is terminated with LISN networks.

The measurements are made with a measurement receiver, the unit being dB μ V

7- Environmental Qualifications

The modules have been subjected to the following environmental qualifications.

Characteristics	Conditions	Severity	Test procedure
Climatic Qualifications			
Life at high temperature	Duration Temperature / status of unit	Test D : 1 000 Hrs @ 105°C case, unit operating @ 125°C ambient, unit not operating	MIL-STD-202G Method 108A
Altitude	Altitude level C Duration Climb up Stabilization Status of unit	40.000 ft@-55°C 30 min. 1 000 ft/min to 70 000 ft@-55°C, 30 min. unit operating	MIL-STD-810E Method 500.3
Humidity cyclic	Number of cycle Cycle duration Relative humidity variation Temperature variation Status of unit	10 Cycle I : 24 Hrs 60 % to 88 % 31°C to 41°C unit not operating	MIL-STD-810E Method 507.3
Humidity steady	Damp heat Temperature Duration Status of unit	93 % relative humidity 40°C 56 days unit not operating	MIL-STD-202G Method 103B
Salt atmosphere	Temperature Concentration NaCl Duration Status of unit	35°C 5 % 48 Hrs unit not operating	MIL-STD-810E Method 509.3
Temperature cycling	Number of cycles Temperature change Transfert time Steady state time Status of unit	200 -40°C / +85°C 40 min. 20 min. unit operating	MIL-STD-202A Method 102A
Temperature shock	Number of shocks Temperature change Transfert time Steady state time Status of unit	100 -55°C / +105°C 10 sec. 20 min. unit not operating	MIL-STD-202G Method 107G
Mechanical Qualifications			
Vibration (Sinusoidal)	Number of cycles Frequency / amplitude Frequency / acceleration Duration Status of unit	10 cycles in each axis 10 to 60 Hz / 0.7 mm 60 to 2 000 Hz / 10 g 2h 30 min. per axis unit not operating	MIL-STD-810D Method 514.3
Shock (Half sinus)	Number of shocks Peak acceleration Duration Shock form Status of unit	3 shocks in each axis 100 g 6 ms 1/2 sinusoidal unit not operating	MIL-STD-810D Method 516.3
Bump (Half sinus)	Number of bumps Peak acceleration Duration Status of unit	2 000 bumps in each axis 40 g 6 ms unit not operating	MIL-STD-810D Method 516.3

8- Dimensions

Dimension are given in mm (inches). Tolerance : +/- 0,2 mm (+/- 0.01 ") unless otherwise indicated.
Weight : 35 grams (1.22 Ozs) max.

Pin dimensions :

Pins 5, 6 : \varnothing 0,73 mm (0.029")

Pins 1, 2, 3, 4 : \varnothing 1,29 mm (0.051")

9- Materials

Case : Metallic case black anodized coating.

Pins : Plated with pure matte tin over nickel underplate.

10- Product Marking

Upper face : Company logo.

Side face : Module reference, option, date code : year and week of manufacturing.

11- Connections

Bottom view

Pin	Single
1	+ Input (Vi)
2	- Input (Gi)
3	- Output (Go)
4	+ Output (Vo)
5	Ground (Gnd)
6	Ground (Gnd)
